

BIO KNIT™

TENSION FABRIC

“MADE TO LAST” SHOULDN’T MEAN “HERE FOREVER”

Our most effective, sustainable fabric for nonlit SEG application. Bio Knit SEG fabric is designed with the performance characteristics of polyester but enhanced for the earth’s ecosystems. Standard polyester molecular chains are so large that it is difficult for microbes to process. Bio Knit incorporates a 2% CiCLO® additive which creates “sweet spots” in each fiber where microbes can break down the fabric. [Check out our Bio Knit projects.](#)

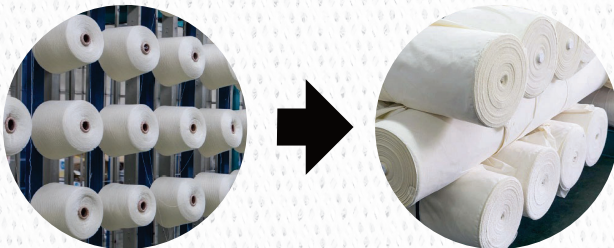

1

CiCLO® additive is blended with polyester fibers

2

Fibers are spun into yarn then milled into Bio Knit fabric

3

Bio Knit is printed using OEKO-TEX certified inks
